

# Loan Default & Overview

Loan Amount by Purpose

Loan demand is **stable across categories**, but housing drives the portfolio. Diversifying loan marketing toward Auto & Education could balance risk exposure.

Average income by Employment Type

Income variation across employment types is minimal. Income alone is **not a strong differentiator for credit risk**.

Default\_rate(%) by Employment Type

Employment stability strongly correlates with repayment behaviour. Employment status is a **stronger risk predictor than income**.

Average Loan by Group age

Loan size decreases slightly with age extremes. Adults (prime earning years) are the **most valuable lending segment**.

Default\_rate(%) by Year

Defaults fluctuate cyclically rather than trending upward. Likely influenced by **external economic factors**, not internal policy alone.
